## TELETEXT

Danish TV teletext pages provide comprehensive information on current weather forecasts and observations.

## www.dmi.dk

In 2002, DMI's website was the most visited public site in Scandinavia, with more than 20 million visits. The website provides weather forecasts, seasonal prognoses, wave heights and much other useful information, including lightning counts and radar and satellite images. In addition, it provides weather-related news and in-depth explanations of current climatic phenomena and weather situations.

*The hurricane on 3 December 1999 resulted in the highest wind speeds ever recorded in Denmark – 38 metres per second. The hurricane caused several fatalities and property damage exceeding 2 billion euro.*
